

Suggested reviewers — IST submission (verified 2026-07-11)

All affiliations/emails verified against official homepages (emails quoted exactly as published; none guessed). CoI screen: none holds an IST editorial role (EiC: Günther Ruhe; Special Content Editor: Jeffrey Carver); none has a Poland/Gdańsk link. Before submitting, glance at the IST editorial-board page once in a browser: <https://www.sciencedirect.com/journal/information-and-software-technology/about/editorial-board>

Pick 3–5 for the Editorial Manager form, in this order:

1. **Tse-Hsun (Peter) Chen** — Associate Professor, Computer Science & Software

Engineering, Concordia University, Montreal, Canada. peterc@encs.concordia.ca — <https://petertsehsun.github.io>
Rationale: author of the ORM performance anti-pattern line (ICSE'14, TSE'16, FSE'16) that this paper directly extends; still active on database-access performance (TOSEM 2024, ICSE/ASE 2025).

1. **Stefanie Scherzinger** — Full Professor, Scalable Database Systems, University

of Passau, Germany. Stefanie.Scherzinger@uni-passau.de — <https://www.fim.uni-passau.de/en/database-systems>
Rationale: co-author of "Tell-Tale Tail Latencies" (TPCTC'21) — the tail-latency and DB-benchmarking-pitfalls methodology at the core of this paper; reproducibility-focused.

1. **Philipp Leitner** — Associate Professor (Docent), Chalmers | University of

Gothenburg, Sweden. philipp.leitner@chalmers.se — <https://www.philippleitner.net/>
Rationale: leading expert on software microbenchmarking rigor (EMSE'19, ICPE): replicates, variability, effect sizes — this paper's methodological frame. (AE of EMSE — no conflict for IST.)

1. **Romain Rouvoy** — Full Professor, Université de Lille / CRISAL (CNRS) / Inria,

France. romain.rouvoy@univ-lille.fr — <https://pro.univ-lille.fr/romain-rouvoy>
Rationale: SANER 2024 ORM performance/energy study — the most recent ORM-benchmarking work among the paper's references.

1. **Alvin Cheung** — Full Professor, EECS, UC Berkeley, USA. (No published email;

contact via homepage.) <https://people.eecs.berkeley.edu/~akcheung/>
Rationale: foundational work on optimizing database-backed applications (query synthesis, PLDI'13 onward); active at the DB/PL intersection.

1. **Cor-Paul Bezemer** — Associate Professor & Canada Research Chair, ECE,

University of Alberta, Canada. bezemer@ualberta.ca — <https://www.ece.ualberta.ca/~bezemer/>
Rationale: performance-engineering state of practice and empirical performance studies (EMSE/TOSEM 2025); ranked last as recent output partly shifted to game/AI QA.

Replacement (if Chen unavailable): **Weiyi Shang** — Full Professor, ECE, University of Waterloo, Canada, wshang@uwaterloo.ca (co-author of the same ORM papers as Chen — do not list both).

Excluded after verification: Guoliang Jin (at Databricks since 2023, research inactive), Christoph Laaber (Leitner's former PhD student — entangled with pick #3), Alexandre Torres (no verifiable current affiliation), Renata Galante (current activity in this area unconfirmed; possible 7th option after checking her UFRGS page).

Diversity: five countries in the top 6; at most two from one country; no two co-authors of the same paper in the top 5.
